 Liq. pharmaceutical compsns. contg. non-lyophilised gamma-
 interferon (I) are new. The compsn. includes an organic
 acid buffer to pH 4-6 (e.g. citrate, succinate, tartrate, fumarate,
 gluconate, oxalate, lactate or *acetate*); a stabiliser
 (esp. a polyhydric alcohol such as glycerol, erythritol, arabitol,
 xylitol, sorbitol or *mannitol*) and a nonionic detergent.
 ADVANTAGE - The compsn. is stable to fluctuations in temp. and
 can be stored for a long time (over 2 weeks) before administration.
 By eliminating the lyophilisation step. formation of dimers and
 oligomers is avoided; no bulking or stabilising agent (such as
 possibly contaminated human serum *albumin*) is needed and
 compsns. can be prepd. more cheaply.

 Stable *interferon* beta (I) compsn. comprises a buffered
 soln. of highly purified (I) with excipients and 0.5-10 wt./vol.% of
 polyvinylpyrrolidone (PVP). The compsns. are storage stable in
 contrast to the lyophilised highly purified (I) alone. (I) is a
 highly active antiviral protein.
 The excipients include *mannitol* and human serum
 albumin . The buffer is suitable *acetate* buffer at
 pH 3.5. The compsn. may be lyophilised and sealed in a container in
 vacuo.

 AB Solid particle aerosol formulations of polypeptide drugs are made by
 lyophilizing solns. of the drugs which contain milling stabilizers
 that inhibit degrdn. of the drug during subsequent milling. The
 lyophilized drug is milled in fluid energy mills that have been
 fitted with abrasion-resistant materials and which use pure nitrogen
 that has been filtered to eliminate particles of greater than 0.1
 .mu.m to transport the drug. The use of (a) milling stabilizers in
 the soln. and (b) abrasion-resistant fluid energy mills that use
 pure filtered nitrogen in the milling step reduce insol.
 contaminants and inactive fractions in the milled product.
 Micronization of human growth hormone, *interferon* -.
 beta ., and granulocyte colony-stimulating factor are
 described.

 AB *Pharmaceutical* services of a Dermatology Ward were
 investigated. Since Yokohama City University Hospital opened in
 1991, pharmacists have joined a medical team of the Dermatology
 Ward. The data base of the inpatients was designed using a personal
 computer and the data were processed statistically. Five hundred
 cases(342 patients) were treated over 3 years at the Dermatology
 Ward of the hospital. The total number of inpatients of malignant
 melanoma was 84, and that of atopic dermatitis was 48. The patients
 of malignant melanoma increased among the aged. On the other hand,
 the patients of atopic dermatitis were concentrated among the
 youngsters. Chemotherapy using dacarbazine, nimustin HCl, vincristine
 sulfate and *interferon* -. *BETA* .(DAV-INF) were
 taken in 43 cases of malignant melanoma. Ketotifen fumarate(anti
 allergic agent, 22 cases), hydroxyzine(antihistamine, 21 cases) were
 taken for atopic dermatitis. As local therapy, many kinds of steroid
 ointments were applied to the inpatients of atopic dermatitis. The
 files prepared by pharmacists are supplying clear data on inpatients

to dermatologists. In the future, the role of pharmacist in the medical team will become more important along with the improvement of the *pharmaceutical* circumstances of the hospital.

AB Human B cell differentiation factor (BCDF) is stabilized and

incorporated into *pharmaceutical* compns., and 2 amino acid

sequences of the BCDF are given. Blood serum proteins (albumins, or

.alpha.2-macroglobulins) are used as solubilizers or stabilizers.

Human BCDF was produced in culture medium of Escherichia coli by

recombinant DNA method. Then, 50 .mu.L 20% human serum

albumin soln. (Na 3.3, Cl 3.1, Na caprylate 2.659,

acetyltryptophan Na 4.2925 mg/mL) was added to 200 .mu.L human BCDF

(20 .mu.g/mL, phosphate buffer soln.), and dild. to 4 mL with

saline. This soln. (200 .mu.L, contg. human BCDF 2 .mu.g and human

serum *albumin* 500 .mu.g) was placed in a vial and

freeze-dried. The product was subsequently dissolved in water and

used for injection.

AB A stable parenteral compn. in liq. or lyophilized form comprises a

recombinant *interferon* -. *beta* . (IFN-.beta.)

protein dissolved in an inert carrier medium contg. nonionic

polymeric surfactants as a solubilizer/stabilizer. The surfactants

include polyoxyethylene sorbitan fatty acid esters, a mixt. of

ethoxylated fatty alc. ethers and lauryl ether, ethoxylated

octylphenol, a mixt. of ethoxylated or propoxylated alcs.,

polyethylene glycol monooleate, ethoxylated phenol, and propylene

oxide-ethylene oxide block copolymers. The compn. further comprises

addnl. bulking/stabilizing agents, such as dextrose. An IFN-.beta.

analog designated as IFN-.beta.ser17 was recovered from Escherichia

coli culture media and stabilized by adding 0.15% Trycol LAL-12 and

pH was adjusted to 7.0 with NaOH. A bulking/stabilizing agent,

i.e., 5% dextrose, was then added and the soln. was

sterile-filtered, aseptically filled into vials, and lyophilized.

The IFN-.beta. formulations of this invention contain very low

levels of aggregates and other potentially immunogenic

characterisitics and minimal or no strong solubilizing agents, such

as SDS, and they are nontoxic and have good shelf life.

AB A stable *pharmaceutical* compn. for parenteral administration comprises a recombinant *interferon* -. *beta* . (IFN-.beta.) protein dissolved in an inert carrier medium contg. .gtoreq.1 biocompatible nonionic polymeric detergent(s) as a solubilizer or stabilizer. The strain of IFN-.beta.ser17-producing E. coli carrying plasmid pSY2501 was cultured. The refractile bodies contg. IFN-.beta.ser17 protein were harvested, concd., and disrupted; EDTA was added to kill residual bacterial and sucrose was added to create a concn. gradient of 1.1-1.25 g/mL and the soln. was centrifuged. The pellet was solubilized in phosphate-buffered saline with 2% Na dodecyl sulfate and dithiothreitol and extd. with 2-butanol. The ext. was again mixed with 0.1% Na dodecyl sulfate in phosphate-buffered saline and dithiothreitol; the mixt. was centrifuged and the pellet contained 81% IFN-.beta.. The pellet was then processed by Sephacryl S200 pre-column chromatog., oxidized by o-iodobenzoic acid, concd., and purified by Sephadex G-75 column. The desalting step was performed at pH 9.2 with Sephadex G-25 column equilibrated with 0.1% Na laurate and the pH of the eluate was lowered to pH 3.0 to ppt. the Na laurate. The mixt. was centrifuged and the supernatant was stabilized by adding 0.15% Trycol LAL-12; the pH was raised to .apprx.7.0 with NaOH and 5g dextrose was then added; finally the soln. was sterile-filtered and the dosage amts. of IFN-.beta.ser17 (0.25 mg) were filled into vials and frozen to between -35 and -45.degree.. A preferred lyophilized normal dose formulation comprises recombinant IFN-.beta. 0.25 mg/mL, polyoxyethylene lauryl ether 0.15% by vol., Na phosphate buffer 20 mM, dextrose 0.2%, and *mannitol* 2%. These IFN-.beta. formulations are at least as stable as human serum *albumin* -contg. formulations and they do not require strong solubilizing agents such as SDS.

AB An active agent delivery system for the controlled administration of a macromol. polypeptide, comprises a polymeric matrix comprising .ltoreq.30% by wt. of particles of polypeptide and other optional water-sol. components dispersed in a polypeptide.

dl-Poly(lactide-glycolide) in acetone and human .beta.-*interferon* in a buffer (contg. human serum *albumin* and dextrose) were vortexed and centrifuged to obtain a pellet, which was dissolved in acetone to leave a microsuspension; the assay for *interferon* in the system showed essentially no loss of biol. activity of the incorporated *interferon* . The above microsuspension was then atomized with a spray device and the resulting particles dried and sorted under vacuum for 3 days; the particles 330 mg were suspended in 5.5 mL of the soln. contg. Na CMC 0.5, NaCl 0.6, PhCH₂OH 0.9, Tween 80 0.1, and water to 100%, to provide an injectable dose of 9 .mu.g of *interferon* per 0.5 mL of injectable suspension.

AB Human *interferon* -. *beta* . (HuIFN-.beta.) titer after intranasal administration was detd. by enzyme immunoassay (EIA), substituting for bioassay. The intranasal absorption was linearly related to HuIFN-.beta. dose. Compared with i.v. administration, the mean bioavailability of intranasal HuIFN-.beta. was 3%. The effects of several excipients, human serum *albumin* (HSA), polyethylene glycol, diethylaminoethyl dextran, carboxypolyethylene, .alpha.-cyclodextrin, and cholesteryl stearate, on the absorption of HuIFN-.beta. were examd. with the powder dosage form. Among these excipients, HSA and .alpha.-cyclodextrin gave the highest HuIFN-.beta. concns. in plasma. The area under the plasma concn.-time curve (AUC) decreased as the mol. wt. of excipients was increased.

AB Recombinant .beta.-human *interferon* (. *beta* -.HIFN) is dissolved in a non-toxic, inert, therapeutically compatible aq. carrier, at a pH of 2-4. The soln. contains a stabilizer for the .beta.-HIFN, particularly human plasma protein fraction, human serum *albumin* , or *mannitol* . This formulation results in very low sodium dodecyl sulfate levels. .beta.- *Interferon* 0.25 mg/mL was formulated using 2.5% plasma protein fraction at pH 3-4, incubated 15-45 min.; the pH was adjusted to 7.3-7.5. At this pH, the solns. were very clear. The use of 5.0% human serum *albumin* also gave clear solns., whereas 2.5% HSA resulted in slightly hazy solns.

SO JOURNAL OF PHARMACEUTICAL SCIENCE AND TECHNOLOGY, (1994 Mar-Apr) 48

(2) 86-91.

Journal code: B2F. ISSN: 1076-397X.

AU Gupta S L; Patel J P; Jones D L; Partipilo R W

L43 ANSWER 2 OF 5 MEDLINE

TI Freeze-drying and quality evaluation of protein drugs.

SO DEVELOPMENTS IN BIOLOGICAL STANDARDIZATION, (1992) 74 307-22.

Journal code: E7V. ISSN: 0301-5149.

AU Inazu K; Shima K

L43 ANSWER 3 OF 5 MEDLINE

TI Combinative improving effect of increased solubility and the use of absorption enhancers on the rectal absorption of uracil in beagle dogs.

SO CHEMICAL AND PHARMACEUTICAL BULLETIN, (1990 Sep) 38 (9) 2547-51.

Journal code: CZP. ISSN: 0009-2363.

AU Takeichi Y; Baba K; Kinouchi Y; Iida Y; Umeno Y; Muranishi S; Nakai Y

L43 ANSWER 4 OF 5 MEDLINE

TI Ethylene-vinyl *acetate* copolymer microspheres for controlled release of macromolecules.

SO JOURNAL OF PHARMACEUTICAL SCIENCES, (1984 Dec) 73 (12) 1859-61.

Journal code: JO7. ISSN: 0022-3549.

AU Sefton M V; Brown L R; Langer R S

L43 ANSWER 5 OF 5 MEDLINE

TI Zero-order controlled-release polymer matrices for micro- and macromolecules.

SO JOURNAL OF PHARMACEUTICAL SCIENCES, (1983 Jan) 72 (1) 17-22.

Journal code: JO7. ISSN: 0022-3549.

AU Hsieh D S; Rhine W D; Langer R

=> d 1-5 ti so au l42

L42 ANSWER 1 OF 218 MEDLINE

TI Controlled-release periodontal chemotherapy: the evolution of antimicrobial delivery systems.

SO PRACTICAL PERIODONTICS AND AESTHETIC DENTISTRY, (1995 Aug) 7 Suppl 1-8.

Journal code: A8A. ISSN: 1042-2722.

AU Rethman J; Rethman M; Suzuki J

L42 ANSWER 2 OF 218 MEDLINE

TI Investigation on the chemical stability of erythromycin in solutions using an optimization system.

SO PHARMACY WORLD AND SCIENCE, (1996 Oct) 18 (5) 182-6.

Journal code: BO7. ISSN: 0928-1231.

AU Brisaert M; Heylen M; Plaizier-Vercammen J

L42 ANSWER 3 OF 218 MEDLINE

TI Time-related induction of DNA repair synthesis in rat hepatocytes following in vivo treatment with cyproterone *acetate*.

SO CARCINOGENESIS, (1996 Oct) 17 (10) 2271-4.

Journal code: C9T. ISSN: 0143-3334.

AU Kasper P; Mueller L

L42 ANSWER 4 OF 218 MEDLINE

TI Microencapsulation of an iron chelator for sustained release and crystal habit modification.

SO JOURNAL OF MICROENCAPSULATION, (1996 Sep-Oct) 13 (5) 519-25.

Journal code: JMG. ISSN: 0265-2048.

AU Venkataram S; Khohlkwane M

L42 ANSWER 5 OF 218 MEDLINE

TI Cellulose *acetate* butyrate microparticles for controlled release of carbamazepine.

SO JOURNAL OF MICROENCAPSULATION, (1996 Jul-Aug) 13 (4) 407-17.

Journal code: JMG. ISSN: 0265-2048.

L44 ANSWER 10 OF 218 MEDLINE

TI Analysis of *pharmaceutical* creams: a useful approach based on solid-phase extraction (SPE) and UV spectrophotometry.

L44 ANSWER 11 OF 218 MEDLINE

TI Suppression of bcl-2 gene expression by sphingosine in the apoptosis of human leukemic HL-60 cells during phorbol ester-induced terminal differentiation.

L44 ANSWER 12 OF 218 MEDLINE

TI Simple production of [1-carbon-11] *acetate* .

L44 ANSWER 13 OF 218 MEDLINE

TI The effects of corticosteroids of adenoviral replication.

L44 ANSWER 14 OF 218 MEDLINE

TI Deviation of the ratio of drugs in a two-component mixture encapsulated in cellulose phthalate microspheres.

L44 ANSWER 15 OF 218 MEDLINE

TI Studies on development of *pharmaceutical* preparation with the purpose of improving controlled-release and bioavailability.

L44 ANSWER 16 OF 218 MEDLINE

TI The empty follicle syndrome: a *pharmaceutical* industry syndrome [see comments].

L44 ANSWER 17 OF 218 MEDLINE

TI Liquid chromatography combined with thermospray and continuous-flow fast atom bombardment mass spectrometry of glycosides in crude plant extracts.

L44 ANSWER 18 OF 218 MEDLINE

TI Enthalpy and entropy contributions to the solubility of sulphamethoxypyridazine in solvent mixtures showing two solubility maxima.

L44 ANSWER 19 OF 218 MEDLINE

TI Chemotherapy of uterine endometrial cancer.

L44 ANSWER 20 OF 218 MEDLINE

TI Determination of vitamin A, vitamin E, and their esters in tablet preparations using supercritical fluid extraction and HPLC.

L44 ANSWER 21 OF 218 MEDLINE

TI Crystal structure of 2-debenzoyl, 2-acetoxy paclitaxel (Taxol): conformation of the paclitaxel side-chain.

L44 ANSWER 22 OF 218 MEDLINE

TI Stability of angesin solution.

L44 ANSWER 23 OF 218 MEDLINE

TI Structures of nanoparticles prepared from oil-in-water emulsions.

L44 ANSWER 24 OF 218 MEDLINE

TI Solubilization of nicardipine hydrochloride via complexation and salt formation.

L44 ANSWER 25 OF 218 MEDLINE

TI Chemical reagents as potential impurities of *pharmaceutical* products: investigations on their genotoxic activity.

L44 ANSWER 26 OF 218 MEDLINE

TI Influence of emulsifying agents on the properties of cellulose *acetate* butyrate and ethylcellulose microcapsules.

L44 ANSWER 27 OF 218 MEDLINE

TI Properties of free films prepared from aqueous polymers by a spraying technique.

L44 ANSWER 28 OF 218 MEDLINE

TI Comparison of three formulations of calcium *acetate* tablets to evaluate tolerance and control of hyperphosphatemia in patients with chronic renal failure [letter].

L44 ANSWER 29 OF 218 MEDLINE

TI N-methyl-2-pyrrolidone as a cosolvent: relationship of cosolvent effect with solute polarity and the presence of proton-donating groups on model drug compounds.

L44 ANSWER 30 OF 218 MEDLINE

TI Preservative efficacy in cefuroxime and ceftazidime eye drop formulations.
